Foreword

The Committee on Payment and Settlement Systems (CPSS) periodically publishes – under the aegis of the Bank for International Settlements (BIS) – reference works on payment systems in various countries, widely known as Red Books. The CPSS has also invited the central banks of a number of countries where important developments in payment systems are under way to prepare – in collaboration with its Secretariat at the BIS – separate volumes on their respective payment systems. The present volume, the second edition of the Red Book for Turkey, is a further step towards increasing our understanding of the way payment systems work in different countries.

Properly functioning payment systems enhance the stability of the financial system, reduce transaction costs in the economy, promote the efficient use of financial resources, improve financial market liquidity and facilitate the conduct of monetary policy. In recent years, issues relating to the economic efficiency and financial risks of all types of payment systems have come to the fore.

Central banks have a strong interest in promoting safety and improving efficiency in payment systems as part of their overall concern with financial stability. They play a key role in domestic payment system development and, in many cases, operate large-value payment systems. Central banks in many countries have been influential in improving public understanding of payment and settlement arrangements in their countries and public awareness of the various policy issues connected with such arrangements. This volume aims to portray the significant steps taken by the Central Bank of the Republic of Turkey in promoting safe and efficient payment systems in Turkey.

We hope that this volume will contribute to the general understanding and awareness of payment and securities settlement arrangements in Turkey, both domestically and internationally.

Timothy F Geithner
Chairman, Committee on
Payment and Settlement Systems

Durmuş Yılmaz

Ykr	New kurus (sub-unit of the national currency, one 100th of the new Turkish lira)

Introduction

As a result of an extensive structural adjustment and liberalisation process launched in the early 1980s, the Turkish economy grew strongly up to the early 1990s. After a downturn in 2001, declining inflation and weakening fiscal dominance promoted high and stable growth, which surpassed the high-growth environment that existed during the 1990s. In the 2002–05 period, average growth in the economy reached 7.1% as opposed to the 3.2% average of the 1990–2001 period. Moreover, the volatility of growth declined fivefold, with the standard deviation falling from 5.9 in 1990–2001 to 1.2 in the post-2001 period.

Turkey managed a significant transformation in the aftermath of the 2001 financial crisis. This included measures for improving market efficiency, strengthening the financial sector and managing the transition to the status of a prospective European Union member.

The structural changes were broadly supported by institutional changes; central bank independence, a shift to the floating exchange rate regime and the setting-up of a supervisory banking institution were the major steps towards ensuring macroeconomic and financial stability. Along with institutional reform, policies were also altered. An “implicit” inflation targeting regime was initiated in 2002 to reduce inflation to single digits. The stability achieved and the success of the institutional reform process were reflected in the decline of inflation from 68.5% in 2001 to below 8% in 2005, and the extension of maturities, initially in public borrowing and later in private contracts.

Liberalisation and structural adjustments had a significant impact on the financial sector. The policy changes created a competitive environment as banks were allowed to widen their range of activities and the conditions for foreign banks’ entry into the domestic financial markets were liberalised. These changes provided the impetus for financial institutions in Turkey to make rapid strides in modernising their services. In particular, payment services have improved substantially with the introduction of new technology. The developments in the communications infrastructure and computer technology have helped banks to improve services throughout the country. Users have been quick to adopt the new instruments and services.

The Central Bank of the Republic of Turkey (CBRT) has played a leading role in the modernisation of payment services. It has developed secure, reliable and efficient interbank payment and settlement systems. In particular, the Turkish real-time gross settlement (RTGS) system, TIC-RTGS, has become an efficient funds transfer system and hence an indispensable component of the financial system.

1. Institutional aspects

1.1 The general institutional framework

1.1.1 Regulatory institutions

In Turkey, there are five major regulators for financial institutions:

- The CBRT is responsible for securing the objectives of price stability and financial system stability. The CBRT is also responsible for the operation, regulation and oversight of payment systems in Turkey. The details of the CBRT's role are described in Section 1.2.
- The Banking Regulation and Supervision Agency (BRSA), which was established under the *Banks Law* (Law No 4389 enacted in 1999; annulled by the *Banking Law*, Law No 5411 enacted in 2005), issues licences, and regulates and supervises all major financial institutions, including banks, financial holding companies, leasing, factoring and consumer finance companies. The BRSA also ensures that independent external auditing firms and rating agencies offering services to financial institutions act in accordance with the principles and methods set by the Agency.
- The BRSA aims to safeguard the rights and benefits of depositors and to create the proper environment in which banks can operate with market discipline in a healthy, efficient and globally competitive manner, thus contributing to the achievement of long-run economic growth and stability of the country.
- The Capital Markets Board of Turkey (CMB) is the regulatory and supervisory authority in charge of securities markets in Turkey. Authorised by the *Capital Markets Law* (Law No 2499 enacted in 1981), the CMB is responsible for regulating and supervising securities markets and institutions, determining the operational principles of capital markets, and protecting the rights and interests of investors.
- In this framework, the CMB regulates and supervises corporations offering securities to the public, securities market intermediaries, securities investment funds (mutual funds), investment companies (including real estate investment companies and venture capital investment companies), independent external auditing firms offering services to capital market institutions, stock exchanges and secondary markets in general, precious metal exchanges and derivatives exchanges, and other related institutions operating on the capital markets, such as ratings agencies, clearing and depository institutions.
- The regulation of capital market instruments, including futures and options, also falls under the regulatory scope of the CMB. In this framework, it also assumes responsibility for introducing and developing new instruments.
- Based on the overall objectives of ensuring the fair and orderly functioning of the markets and protecting the rights of investors, the major goal of the CMB is to take necessary measures to foster the development of capital markets, hence contributing to the efficient allocation of financial resources in the country while ensuring investor protection.
- The General Directorate of Insurance under the Turkish Treasury is responsible for the regulation and supervision of the insurance business, both life insurance and casualty insurance, in accordance with the *Insurance Law* (Law No 7397 on "Supervision of Insurance Companies", enacted in 1959).
- The Turkish Competition Authority (TCA), which was established by the *Protection of Competition Law* (Law No 4054 enacted in 1994) and commenced operation in 1997, is responsible for preventing proposed mergers and acquisitions that would create a dominant position in the market and adversely affect competition.

In accordance with the *Regulation on Mergers and Acquisitions Requiring Authorisation by the TCA* (Communiqué No 1997/1 enacted in 1997), authorisation by the TCA is obligatory when the total market share of the undertakings, including banks, carrying out the merger or acquisition exceeds 25% of the relevant product market throughout the country or a part thereof, or when their total turnover exceeds TRY 25 million. The TCA may authorise a proposed merger or acquisition on condition that other measures deemed appropriate are taken and certain obligations are met.

1.1.2 The legal framework for the payment and settlement systems

Although there are no laws dealing specifically with payment and settlement systems, a number of laws have a bearing on payment-related activities and institutions:

- The *Law on the Central Bank of the Republic of Turkey (CBRT Law)* (Law No 1211 enacted in 1970; last amended by Law No 4651 enacted in 2001) regulates the operations of the CBRT, whose major functions and responsibilities derive from this Law – inter alia the exclusive right to issue banknotes in Turkey. The Law authorises the CBRT to establish payment, securities transfer and settlement systems, to enact regulations to ensure the uninterrupted operation and oversight of existing or future systems, and to determine the methods and instruments, including the electronic environment for payments.
- The *Banking Law* (Law No 5411 enacted in 2005; amended by Law No 5472 enacted in 2006) regulates the business activities of all banks, namely deposit banks, participation banks and development and investment banks, in Turkey and Turkish branches of such institutions established abroad. The Law lays down rules and procedures governing the incorporation, management, transactions, transfer, merger, liquidation and supervision of banks, acceptance of deposits and participation funds, in order to protect the rights and interests of depositors. Its purpose is also to ensure the efficient functioning of the credit system by giving due consideration to confidence and stability in financial markets. All activities of financial holding companies, the Banks Association of Turkey (BAT), the Participation Banks Association of Turkey (TKBB), the Banking Regulation and Supervision Agency (BRSA) and the Savings Deposits Insurance Fund (SDIF) are also governed by the provisions of this Law.
- Article 79 of the Banking Law makes it obligatory for all deposit, development and investment banks subject to this Law to become a member of the BAT, and for all participation banks to become a member of the TKBB, within one month of receipt of their operating licence.
- The *Capital Markets Law* (Law No 2499 enacted in 1981; amended by Law No 4487 enacted in 1999) regulates and controls the secure, transparent and stable functioning of the capital markets and protects the rights and interests of investors, for the purpose of ensuring efficient and widespread participation by the public in the development of the economy through investment of savings in the securities market. Capital market instruments and their public offering and sale, exchange markets and other markets organised pursuant to the Law, capital market activities, capital market institutions and the Capital Markets Board are subject to the provisions of the Law. The Law focuses on shares offered to the public and does not apply to the issuance of shares not offered to the public by joint stock corporations that are not publicly held.
- The *Cheque Law* (Law No 3167 on “Arrangement of Payments by Cheque and Protection of Cheque Bearers”, enacted in 1985; amended by Law No 4814 enacted in 2003) governs all aspects of payment by cheque and provides the framework for

issuance, acceptance and payment of cheques. Article 6 of the Law governs the establishment and functioning of the interbank clearing houses (ICHS). Under the Central Bank Law, the CBRT is responsible for their supervision.

- The *Bank Cards and Credit Cards Law* (Law No 5464 enacted in 2006) aims to ensure the efficient functioning of card-based payment systems by establishing rules and procedures governing the issuance, usage and clearing of bank and credit cards. The Law also governs the issuance and revocation of operating licences, the obligations of card issuers, and the penalties and obligations of card bearers.
- The *Public Finance and Debt Management Law* (Law No 4749 enacted in 2002; last amended by Law No 5335 enacted in 2005) establishes rules and procedures for domestic and foreign public debt management. Article 6, paragraph 4, of the Law authorises the Undersecretariat of the Treasury and the CBRT to regulate the issuance of government bonds and treasury bills in book entry form. All securities transfers under this Law are registered with the Electronic Securities Transfer and Settlement System (TIC-ESTS), which is the securities settlement system of the CBRT. The final settlement of the related payments is provided by the national Real-Time Gross Settlement System (TIC-RTGS).
- The *Turkish Commercial Code* (Law No 6762 enacted in 1956) defines in Articles 557–815 the form and usage of negotiable instruments, namely promissory notes, bills and cheques, which are used widely for commercial payments.
- The rules and procedures governing participation in TIC-RTGS and TIC-ESTS are governed by a special agreement between the CBRT and participating banks. The banks sign a participation contract with the CBRT agreeing to comply with the provisions of the *TIC-RTGS & ESTS Operational Rules*. These rules define the relationship between the CBRT and the participating banks and between the participants concerning the services provided by TIC-RTGS and TIC-ESTS. In particular, they specify the roles of the various parties involved in the system. The operational procedures, rights, obligations and a clause stipulating arbitration as a means of dispute resolution are also governed by these rules.

1.1.3 The role of financial intermediaries

As of the third quarter of 2006, the financial sector in Turkey comprised 50 banks, 77 leasing companies, 87 factoring companies, 45 insurance companies and nine consumer finance companies, along with 286 mutual funds, 30 investment companies, 106 securities brokerage firms and 11 pension companies (102 pension funds). However, as seen in Graph 1, banks dominate the financial system, and as of September 2006 87.8% of financial sector assets consisted of bank assets. As of the same date, the ratio of total bank assets to GDP stood at 86.5%. Compared to EU countries, the Turkish banking system is still small and has the potential to grow much further.

Prior to the Banks Law (Law No 4389 enacted in 1999; annulled by the *Banking Law* No 5411 enacted in 2005), the Undersecretariat of the Treasury and the CBRT jointly supervised the banks. While the CBRT was mainly involved in off-site supervision, the Treasury carried out on-site supervision and regulation. The Banks Law established the BRSA as the sole regulatory and supervisory body for the Turkish banking sector. With the establishment of the BRSA, the Savings Deposits Insurance Fund (SDIF), which had operated under the CBRT, was restructured under the BRSA. Finally, in December 2003, the SDIF became an autonomous body.

Leasing, factoring and consumer finance companies began to be supervised and regulated by the BRSA in 2006. Previously, these institutions were supervised by the Treasury. Insurance companies continue to be supervised and regulated by the Treasury. The CMB supervises capital market institutions and activities.

1.1.3.1 Banks

Banks in Turkey are established as joint stock companies and are subject to the provisions of the Banking Law. In line with the criteria set forth in this Law, a bank established abroad may also operate in Turkey by opening a branch. There is no distinction between foreign and Turkish banks in terms of the regulatory and supervisory framework. Banks' paid-up capital should not be less than TRY 30 million.

Banks in Turkey are grouped into deposit banks, investment and development banks, and participation banks. As of January 2007, there were 33 deposit banks (three public, 15 private and 15 foreign banks), 13 development and investment banks (three public, eight private and two foreign banks), and four participation banks. The total number of branches of all banks, including participation banks, was 7,304 and the total number of personnel was 150,851.

All types of deposit banks – private, public or foreign – perform traditional banking operations such as deposit-taking, payment services, foreign exchange operations and marketing of securities and other financial products. However, deposit banks are not allowed to provide financial leasing activities. Deposit banks, with a nationwide branch network, provide most of the payment services. Sight deposits are mostly used for funds transfers. Banks offer cheque and card facilities for account holders. Deposit banks are members of the national RTGS system and interbank clearing houses (ICHs).

Most banks have largely computerised their operations. Internet banking services are offered by all commercial banks. These services include a variety of technology-intensive applications such as online credit transfers, online investment accounts, trading of government bonds, mutual funds and equities. Many banks offer customers a real-time funds transfer service through TIC-RTGS.

The development and investment banks carry out all banking operations apart from deposit-taking. They provide investment advisory services and consultancy on transfer and merger issues, financial restructuring and efficient management practices in commercial enterprises. They also grant credits from their own funds and other funds under their management; they can offer cheque accounts and participate in ICH clearing. Development and investment banks' total paid-in capital may not be less than two-thirds of that stipulated for other banks (ie TRY 20 million).

Participation banks (formerly known as special finance houses, or SFHs) operate pursuant to the Banking Law. Similar to deposit banks, they can collect deposits in Turkish liras and in foreign currency. However, they operate on profit and loss sharing principles and do not pay interest on deposits.

Participation banks provide payment services and cheque and card facilities and participate in clearing and settlement in the same manner as other banks. In contrast to deposit banks, participation banks are allowed to engage in leasing activities along with development and investment banks. Currently, there are four participation banks in Turkey and their share in the total financial system is around 2%.

Following the 2000–01 crisis period, a restructuring programme was initiated by the BRSA, based on four pillars: restructuring of state banks, resolution of the banks managed and controlled by the SDIF, strengthening of private banks and strengthening of the regulatory and supervisory framework. As a result, the banking sector entered into a consolidation process, the share and burden of state-owned or SDIF-controlled banks have declined, fragilities in the banking sector have diminished and the supervisory and regulatory framework has been upgraded to international standards and become more risk-focused. The increased soundness of the banking system as a result of this rehabilitation process is well demonstrated by the increasing interest shown by major foreign banks in Turkish banks. As of November 2006, the share of non-residents in the Turkish banking system has reached 20.2% in terms of banking sector assets.

1.1.3.2 The Post Office

The Post Office (the General Directorate of Posts, which comes under the Ministry of Transportation) plays a significant role in providing payment and remittance services to customers all over Turkey. At end-2006, there were 3,049 Post Office branches that handle remittances. The Post Office offers cheque accounts and money order services. The money order facility can be used for remitting money all over the country and beneficiaries are not required to have an account with the Post Office. In 2006, 24.5 million domestic money orders worth TRY 22 billion were processed by the Post Office. In addition to these services, Post Office branches can issue domestic traveller's cheques, change foreign currency and receive postal money orders from abroad.

1.2 The role of the CBRT

The CBRT was established in 1930 under the Central Bank Law (Law No 1715). In 1970, the *Law on the Central Bank of the Republic of Turkey (CBRT Law)* (Law No 1211) was enacted. This Law introduced considerable changes in central banking and the central bank's responsibilities for managing and controlling currency circulation. To allow the CBRT to better fulfil its functions, the Law was amended several times between 1970 and 2001. With the last amendment in 2001, the primary objective of the CBRT was clearly set as achieving and maintaining price stability, and the CBRT was given direct authority to formulate monetary policy and to choose monetary instruments at its own discretion in order to achieve its primary objective. The CBRT has exclusive power and responsibility for designing and implementing its monetary policy.

The central bank's head office is in Ankara. The CBRT has 21 branches in Turkey and four representative offices abroad, in Frankfurt, London, New York and Tokyo.

1.2.1 General responsibilities

The CBRT determines monetary policy and the monetary instruments needed to achieve and maintain price stability. The *CBRT Law* sets out the fundamental duties and powers of the CBRT as follows:

- to take necessary measures jointly with the government to protect the domestic and international value of the national currency and to establish the exchange rate policy for determining the parity of the Turkish lira against gold and foreign currencies; to execute transactions, such as spot and forward purchases and sales of foreign currency, foreign exchange swaps and other derivatives transactions, in order to determine the value of the Turkish lira against other currencies;
- to regulate the volume and circulation of the Turkish lira;
- to establish payment, securities transfer and settlement systems, to enact regulations to ensure the uninterrupted operation and oversight of the existing or future systems, and to determine the methods and instruments, including the electronic environment for payments;
- to carry out open market operations;
- to conduct rediscount and advance transactions;
- to manage gold and foreign exchange reserves;
- to take precautions to enhance stability in the financial system and to adopt regulatory measures with respect to money and foreign exchange markets;
- to issue banknotes in Turkey, under the exclusive right and privilege given to it;
- to utilise the monetary policy instruments described in the Law and to identify and implement other monetary policy instruments directly when it so deems appropriate;
- as the lender of last resort, to carry out credit operations with the banks.

1.2.2 Administration of accounts

The Treasury, banks, exchange offices, public entities (state-owned economic enterprises, ministries) and international organisations (IMF, World Bank, Asian Development Bank) hold accounts with the CBRT. Accounts, with the exception of reserve requirement accounts,¹ do not bear interest, and are used for funds transfers between the account holders, including settlement of obligations arising from interbank clearing systems. Banks hold giro accounts, reserve requirement accounts and TIC-RTGS accounts. Giro accounts are mostly used for cash withdrawal. The funds maintained in giro accounts are usually a small portion of the total bank funds deposited with the CBRT. A separate account, the TIC-RTGS account, is used for payments routed through TIC-RTGS. Although banks' reserve requirement accounts are separate from their settlement accounts, the balance of the former is transferred to the latter at the beginning of each day for settlement purposes.

Accounts are decentralised and the account holders may have accounts with more than one branch of the CBRT. These accounts are controlled exclusively by their holders and debits from them may be made only on the holders' instructions.

¹ Since August 2001, reserve requirement accounts have borne interest.

1.2.3 Payment systems oversight

According to the CBRT Law, the CBRT is responsible for the oversight of payment systems in Turkey. The Law stipulates the fundamental duties and powers of the central bank, including:

“... to regulate the volume and circulation of the Turkish lira, to establish payment, securities transfer and settlement systems, to enact regulations to ensure the uninterrupted operation and oversight of the existing or future systems, and to determine the methods and instruments, including the electronic environment for payments.”

Consistent with the CBRT Law, the objectives and policies of the CBRT in the payment systems area are defined as follows:

- to make the necessary arrangements to ensure the smooth, reliable and efficient functioning of payment systems and to mitigate the possible risks involved in payment systems;
- to determine the appropriate tools and procedures for payments;
- to make the necessary arrangements to effectively apply monetary policy designed to ensure financial and monetary stability;
- to ensure public confidence in payment and securities transfer systems;
- to continuously monitor system compliance with the Core Principles for Systemically Important Payment Systems (Core Principles for SIPS)² in order to prevent the systemic risks that can arise from payment systems;
- to monitor developments that can affect the effectiveness and reliability of the systems; and
- to coordinate its work with other supervisory authorities and system participants.

The CBRT has disclosed its major objectives and policies concerning payment systems to the public both on its website (www.tcmb.gov.tr) and in its publications.

Since its first day of operation, the CBRT has used various instruments in the performance of its oversight function for TIC-RTGS: issuance of regulations, moral suasion vis-à-vis the participants, direct provision of payment services (as the owner and operator of the system) and application of sanctions (as described in the *TIC-RTGS and ESTS Operational Rules*).

In line with the development of the payment system oversight concept, the CBRT has recently attempted to restructure and formalise its payment system oversight role.

1.2.4 Activities in the area of securities clearing and settlement systems

The CBRT is the owner, operator and overseer of TIC-ESTS, the Electronic Securities Transfer and Settlement System. The TIC-ESTS system, which began operating in October 2000, has a real-time connection to TIC-RTGS and is used for the issuance and settlement of short- and medium-term debt instruments on behalf of the Treasury (see Section 4.3.3 for details).

² See Committee on Payment and Settlement Systems, *Core Principles for systemically important payment systems*, Basel, 2001.

1.2.5 The operational role of the CBRT

The CBRT is the operator of TIC-RTGS and TIC-ESTS. The details of its operational role are described in Section 5.1.1.

1.2.6 Cooperation with other institutions

Cooperation between the CBRT and other authorities is based on mutual understanding. For example, the CBRT has cooperated with the CMB on the project for safekeeping of customer securities under the customer's name in the Central Registry Agency (see Sections 1.3.5 and 4.3.3.3). Similarly, the CBRT cooperated closely with the Undersecretariat of the Treasury on the project for the improvement of public payments processing.

The CBRT is entitled to receive financial information from financial institutions, including the BRSA, pursuant to the CBRT Law. Moreover, in August 2000, the CBRT, the Undersecretariat of the Treasury and the BRSA signed a memorandum of understanding on information sharing in the financial sector.

1.3 The role of other private and public sector bodies

1.3.1 Banks Association of Turkey

The Banks Association of Turkey (BAT) was founded in 1958 under Article 57 of the *Banks Law*³ (Law No 7129 enacted in 1958). Its duties and powers have been revised in the new Banking Law (Law No 5411 enacted in 2005). A professional organisation, the BAT is a legal entity with the status of a public institution, and it is the representative body for all banks operating in Turkey with the exception of the participation banks.

According to its statute, the purpose of the BAT is to: preserve the rights and interests of banks; carry out studies aimed at enhancing the growth and robust operation of the banking sector, the development of the banking profession and the strengthening of competitiveness; adopt and implement all measures necessary for the prevention of unfair competition; and ensure implementation of these measures in line with the principles of open market economies and perfect competition and with the regulations, principles and rules of the banking industry. All deposit, investment and development banks operating in Turkey are legally bound to become members of the BAT. Each bank is represented in the Association by its chairperson, managing director or general manager.

The BAT is responsible for:

- ensuring the development of the banking profession;
- ensuring that banks function in a prudent and well disciplined manner as required by the Association and the banking profession in order to meet the needs of the national economy;
- adopting and implementing all measures necessary for the prevention of unfair competition among banks;
- determining the principles and conditions to be respected by banks, based on approval by the Banking Regulation and Supervision Agency.

The BAT monitors implementation of the decisions taken pursuant to the applicable legislation and measures required by the Agency. The organisational structure of the Association consists of the General Assembly, the Board of Directors, the Secretariat

³ The Banking Law (Law No 5411) superseded the Banks Law in 2005.

General and the Auditors. The operations of the Association are executed through several structural and functional groups.

1.3.2 Participation Banks Association of Turkey

The Participation Banks Association of Turkey (TKBB) was founded in 2005 under Articles 79–81 of the Banking Law (Law No 5411). Like the BAT, the TKBB is an institutional association whose members are participation banks (see Section 1.1.3.1). The status of the TKBB was defined by the Participation Banks Association Decree of the Council of Ministers (No 2006/10018).

1.3.3 Istanbul Stock Exchange (ISE)

The ISE, which began operation in 1986, is the only securities exchange in Turkey. It is a public institution regulated by the CMB. Government bonds, treasury bills, CBRT liquidity bills, capital market instruments, share income certificates and international securities are traded on the ISE.

The bonds and bills market is the only organised, fully automated market for both outright purchases and sales and repurchase/reverse repurchase transactions with fixed income securities. The market's purpose is to provide a transparent, liquid, competitive and efficient environment for the secondary market of government bonds, treasury bills, revenue-sharing certificates, bonds issued by the Privatisation Administration and corporate bonds listed on the ISE. Treasury bills and government bonds are the most actively traded instruments. The bonds and bills market was established in June 1991, while repo/reverse repo transactions began in February 1993.

1.3.4 ISE Settlement and Custody Bank, Inc (Takasbank)

Takasbank is the clearing and settlement institution of the ISE, the clearing house for the Turkish Derivatives Exchange, the official custodian for investment and pension funds, and the national numbering agency for securities issued in Turkey.

Takasbank is also a specialised bank dedicated to securities services in Turkey. It serves the financial markets in the capacity of a non-deposit-taking bank. In relation to banking services, Takasbank is regulated by the BRSA. With respect to clearing and settlement functions, Takasbank is regulated by the CMB and the ISE.

Takasbank was originally set up as a department of the ISE in 1988, with responsibility for settlement and custody. In 1991 it became an independent organisation and in 1996 it was converted into a bank. As a specialised bank, Takasbank provides ISE members with money market facilities. It offers short-term loans to capital market players through securities purchasing loans (cash credits) and ensures that money market transactions between banks and brokerage houses are carried out in a transparent, fast and reliable environment.

Takasbank, which is a participant in TIC-RTGS and ESTS, provides ISE members with indirect access to the system through an interface called TETS (Takasbank Electronic Transfer System). TETS enables brokerage houses to transfer both cash and government bonds and bills in and out of the Takasbank system electronically, through a real-time connection with the central bank's TIC-RTGS and ESTS, and receive reports related to these transactions. Through TETS, brokerage houses can participate in treasury auctions, provide collateral for bids, and make other payments quickly and in a cost-effective manner.

Takasbank has giro and TIC-RTGS accounts at the CBRT. Payments in connection with securities transactions between Takasbank members are settled net in the Takasbank accounts (see Sections 3.3 and 4).

Takasbank also provides custody services for the portfolio assets of mutual funds and investment trusts and assumes various responsibilities regarding private pension funds (introduced in 2003 in the context of the private pension savings and investment system). The Bank also carries out custody, settlement and other related operations of pension fund transactions in capital markets.

Takasbank has a correspondent relationship with Euroclear Bank. In this capacity, Takasbank provides international settlement and custody services for foreign securities such as eurobonds, foreign bonds, depository receipts, etc. With these services, Takasbank has taken its expertise in clearing, settlement and custody services abroad, aiming to make post-trade services accessible to all financial institutions in terms of technical expertise, operational experience and cost. At end-2006, there were 74 institutions receiving international securities correspondent services from Takasbank.

Takasbank carries out settlement of securities trade in all ISE markets. The bank clears ISE trades in the Takasbank Clearing System (see Sections 3.3 and 4.1.2.2) by multilateral netting and settles accordingly. Payments are settled on a “delivery versus payment” (DVP) principle; the members do not get their receivables unless they fulfil their obligations. In case of partial fulfilment of an obligation, proportional payment or transfer out of the receivable is made to the member. Net obligations are legally binding, but Takasbank does not guarantee settlement.

The Securities lending and borrowing market (SLBM) was established in November 2005 to minimise potential defaults in the market. The SLBM provides an organised market environment for borrowing share certificates and exchange-traded fund certificates for a certain period against collateral as determined by Takasbank and approved by the CMB.

1.3.5 Central Registry Agency

The Central Registry Agency (CRA) registers capital market instruments and rights related to them in book entry form. The CRA is a private company established in 2001 as a legal entity under the provisions of the *Capital Markets Law* and is regulated by the CMB. The CRA keeps records in electronic format with respect to issuers, intermediary institutions and owners of rights. The CMB can determine the rights to be recorded and the types of related capital market instruments.

The Central Dematerialisation System was put into operation in November 2005. The CRA took over central securities depository functions for equities upon completion of the dematerialisation system. All equities are registered as dematerialised shares in the Central Dematerialisation System. Clients' safekeeping accounts were transferred from Takasbank to the CRA and book entry records were automatically registered by the CRA in line with the dematerialisation process and recorded at the beneficial owner level. Takasbank currently has a 65% stake in the share capital of the CRA. Takasbank will maintain its functions as the clearing and settlement institution for the Istanbul Stock Exchange, providing the omnibus account with the CRA for securities settlement purposes. The CRA and Takasbank systems will be interlinked in real time so calculated securities transfers will be reflected in the CRA instantaneously. Real-time gross DVP “member-to-member” settlement will continue to be executed via Takasbank.

2. Payment media used by non-banks

2.1 Cash payments

Cash is the dominant retail payment medium in Turkey, although in recent years there has been a growing tendency to use alternative payment methods. No exact figures are available

for cash payments but households mostly use cash for their everyday payment requirements. However, the use of cash to pay wages, salaries and pensions is declining as an increasing proportion of such payments are being made by credit transfer.

The CBRT is the sole issuing authority for banknotes with the status of legal tender. As of 1 January 2005, six zeros were removed from the Turkish lira (TRL) and the currency was renamed as the new Turkish lira⁴ (TRY). The subunit, which is one 100th of a new Turkish lira, is called the new kuruş (Ykr). Banknotes are issued in denominations of TRY 1, 5, 10, 20, 50 and 100. The TRY 50 note has the largest share of the currency in circulation. Coins are issued by the Undersecretariat of the Treasury in six denominations: 1, 5, 10, 25 and 50 new kuruş (Ykr) and 1 new Turkish lira.

TRL banknotes and coins were withdrawn from circulation at the beginning of 2006. However, as from 1 January 2006, they will be converted into TRY at the CBRT and T.C. Ziraat Bank branches for a period of 10 years for banknotes and one year for coins.

As of September 2006, total banknotes and coins in circulation amounted to TRY 23.9 billion. The share of cash in M1 (52.5% in 2006) illustrates the dominance of cash payments in Turkey. Cash withdrawals are made mainly from bank branches or cash dispensers. Banks encourage the use of ATMs for cash withdrawals and their usage is increasing. Some banks share their ATM networks and this has allowed small banks to offer ATM facilities to their customers.

2.2 Non-cash payments

2.2.1 Paper-based payments

Traditionally, cheques and promissory notes were the commonly used non-cash payment instruments. However, in recent years other payment methods, notably electronic and card-based instruments, have increasingly supplanted the paper-based instruments.

2.2.2 Cheques

The Turkish Commercial Code and the Cheque Law govern all aspects of cheque payments and provide the framework for issuance, acceptance and payment of cheques. Banks provide a cheque account facility to their customers in accordance with the Cheque Law. The bank of issue pays the cheques directly or through clearing houses when other banks present them. Cheques are free of collection charges for both the drawer and the payee. However, if a cheque is paid by a branch other than the branch where the account is maintained, an authorisation charge is usually levied.

To facilitate electronic processing, cheques are coded with MICR (magnetic ink character recognition) code in E13B format.

Traveller's cheques are issued by banks and are not accepted for interbank clearing. Banks collect traveller's cheques and send them directly to the branch of the paying bank for payment. In 2006, clearing houses processed 23.6 million cheques with a total value of TRY 186.9 billion.

⁴ The word "new" will be dropped from the name of the currency at the end of a transition period, the end date of which will be decided by the Council of Ministers. Hence, the text refers to the currency simply as Turkish lira, unless a value is specified.

2.2.3 Postal cheques

The Post Office provides postal cheque account facilities to any firm or individual. These accounts do not pay interest but are free of any commission charges for operations conducted through them. Postal cheque accounts are used mostly by public institutions for collecting various types of tax and by companies for receiving payment instalments.

In 2006, there were over 692,000 postal cheque accounts, and 10.2 million postal cheques were processed, for a total value of TRY 15.6 billion.

2.2.4 Promissory notes

Promissory notes are defined in the Turkish Commercial Code. They are widely used like cheques in the small and medium-sized business sector. They do not contain any bank information. They are signed by the two parties and indicate the amount to be paid and the value date. The beneficiary may obtain funds before the value date by having the promissory note discounted by a bank.

2.2.5 Credit transfers

Credit transfers are an increasingly popular means of transferring funds among customers. To make such transfers, customers are required to maintain sight deposits, which carry a low rate of interest.

There are two categories of credit transfer: (1) credits to other account holders with any bank; (2) credits to non-account holders. The first is an ordinary credit transfer operation between two accounts. The account holder gives a written transfer order, which is carried out if there are enough funds in the account. The second category of credit transfer enables funds to be sent to a beneficiary who does not maintain an account with any bank. In this case, the customer making the payment specifies the name of the beneficiary, the address and the bank/branch where the payment is to be made. When the transfer reaches the counterpart bank/branch, the beneficiary is notified of the remittance and can go to the branch and withdraw the money.

All interbank and intrabank credit transfers are processed electronically. Most branches receive credit transfer instructions from customers in written form and these are sent electronically to the final destination. Most banks also provide a credit transfer facility via ATMs, the internet or telephone.

Bank customers can issue standing orders for regular payments that are executed automatically on specified dates. The Post Office also provides credit transfer facilities to its account holders.

In 2006, 142.3 million credit transfers⁵ were executed, up by 36.2% from 2004, with 94.2 million being processed via TIC-RTGS, 24.5 million via the Post Office and 23.6 million via the BTOM (interbank cheque clearing houses centre).

2.2.6 Payment cards

2.2.6.1 Credit cards

Credit cards offer a cashless payment medium combined with a revolving credit and cash advance facility. In recent years, many banks have also introduced a facility for paying back

⁵ Interbank transfers only; data on intrabank transfers are not available. The Post Office figure covers only domestic transfers. For postal cheque transactions and international transfers by the Post Office, see Sections 2.2.3 and 3.5.3, respectively.

credit card transactions in instalments without incurring any interest charges. These features have made credit cards very popular and their numbers are steadily rising. Cardholders are charged an annual subscription fee while the merchants pay a commission to the acquirer.

Credit cards were first introduced in 1968, but their growth began in the early 1990s. In the last decade the number of credit cards provided to customers by banks and financial institutions has risen strongly. By the end of 2006, the total number of credit cards issued in Turkey reached 32.4 million, an increase of 63.3% since end-2003. In 2006, the total number of transactions inside and outside Turkey using cards issued in Turkey was 1.34 billion, for a total value of TRY 108.4 billion.

Turkey launched the chip and PIN method (PIN entrance and offline PIN validation for chip credit card purchases) on 31 March 2006, the third country in Europe to do so. The chip and PIN is a new payment method minimising the risk of credit card fraud by preventing counterfeit and lost or stolen card usage. End-2006 figures show that 91% of POS terminals and 82% of credit cards in the market are EMV-compliant. In a recent development, the Interbank Card Centre (BKM) has prepared local regulations for cash withdrawal with credit cards at the point of sale.

2.2.6.2 Debit cards

Debit cards are typically used to withdraw cash and to send remittances by debiting the holder's account at ATMs. Since 1994, they may also be used for retail purchases direct from the current account via POS terminals at merchant establishments. To create awareness on debit card use at the point of sale, the Interbank Card Centre (BKM) launched an advertising campaign beginning in October 2004, with the aim of generalising the use of debit cards and convincing cardholders to use debit cards instead of cash when shopping. As a result, the total volume and value of such purchases increased by about 140% in two years, and reached 50 million transactions with a total value of TRY 1.52 billion in 2006. The BKM continued this effort in subsequent years and will continue in the upcoming years to promote debit card usage at the point of sale.

At the end of 2006, the total number of debit cards was 53.5 million. At end-2006, 1,282,658 POS terminals that accept debit cards were available at 840,059 merchant establishments, including department stores, supermarkets, petrol stations, numerous retailers covering such sectors as clothing and luxury goods, food, electronics, drugs and sanitary products, furniture, car rentals, etc.

The latest development in debit card services consists of allowing consumers to withdraw cash at selected retail stores through POS terminals. This "cashpoint" service, which was introduced by a major bank in January 2006, resembles a cash-back transaction, yet it does not require the consumer to purchase any item at the retail store. The service is free of charge and, as of June 2006, was available at 217 points.

Furthermore, in March 2006, the BKM prepared the infrastructure and the local regulations that allow all applicant member banks to provide a cash withdrawal service on a debit card purchase transaction ("cash-back") at the point of sale.

2.2.6.3 Prepaid cards

The most frequently used prepaid cards are disposable phone cards issued by Turkish Telekom for making calls from public telephones, reloadable cellular phone cards issued by GSM operators, reloadable payment cards used at ticket gates of toll roads, and reloadable public transportation tickets issued by municipalities (see also Section 3.4.3).

The municipalities of some cities, including Istanbul and Izmir, are providing reloadable public transportation tokens and cards for travel on the metro, boats, buses and trams, as well as the natural gas and water utilities.

In 2006, TRY 107.1 million worth of phone cards were sold, while the total value reloaded on transportation cards issued by the municipalities of eight cities⁶ was over TRY 809 million.

2.2.7 ATMs and POS terminals

The first ATM service in Turkey started in December 1987. Since then, ATMs have continually increased in number. At end-2006, there were a total of 16,511 ATMs installed in Turkey, representing a rise of 11.4% over 2005. ATMs allow consumers to check their current account balance, withdraw cash, initiate credit transfers, pay bills or credit card debts, access their investment accounts and generate transactions themselves. In addition, some banks have begun to operate advanced ATMs that allow consumers to deposit cash, which becomes instantly available in their current account. A major bank also allows withdrawals in foreign currencies through a limited number of ATMs, typically located in tourist areas.

BKM member banks have made significant investments in the payments infrastructure by installing POS terminals that authorise and record transactions at merchant outlets. At end-2006 there were 1.3 million POS terminals, an increase of 12.4% over 2005.

2.2.8 Other access channels for banking and payments

2.2.8.1 Telephone banking

Since the introduction of telephone banking in 1991, the range of phone banking services has increased. Besides being able to transfer funds and conduct account balance enquiries over the telephone, bank customers can also pay bills or credit card balances, trade mutual funds or stocks, and set up a time deposit.

2.2.8.2 Internet banking

The growth and spread of internet banking services has been unexpectedly high, reflecting a high degree of public acceptance. First introduced in 1997, internet banking is now provided by all deposit banks. This facility allows consumers to conduct account balance enquiries, transfer funds (including transfers to third-party accounts with other banks), trade mutual funds or stocks, apply for loans, pay credit card balances or bills, and trade or transfer foreign exchange. In addition, other services, such as operations related to insurance and pension funds, are increasingly available via internet banking.

2.2.8.3 Mobile banking

Since 2000, bank customers have been able to conduct banking transactions by means of GSM-based mobile phones. This feature, which was initiated for mobile phones with WAP-GPRS functionality, was extended to all types of phones after about a year. Using this channel, customers can do almost everything they can do via internet banking.

2.3 Recent developments

In November 2004 a major bank introduced a new facility to transfer funds via mobile phones. This was followed by a similar facility from another major bank in September 2005. These facilities allow a customer to enter a funds transfer order via his or her mobile phone by specifying the amount and the phone number of the recipient. The latter receives an SMS message indicating the receipt of the transfer and a four-digit code, to be used at an ATM to withdraw the money transferred without needing a card.

⁶ In 2006, reloadable transportation tokens were available in Istanbul, Izmir, Manisa, Denizli, Adana, Kocaeli, Çanakkale and Bandırma.

3. Interbank exchange and settlement systems

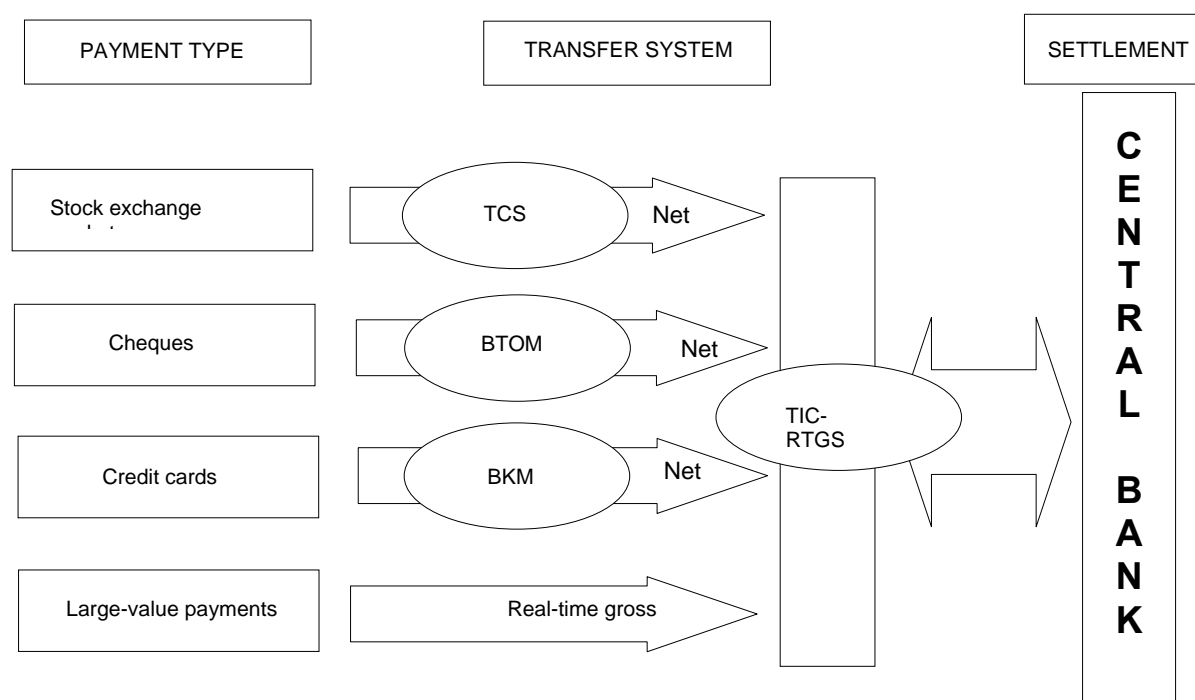

3.1 General overview

In Turkey, the major interbank payment systems are those related to stock exchange payments, check clearing and credit card payments, and other large-value interbank payments, and include:

- TCS: the Takasbank clearing system;
- BTOM: the system of the Interbank Clearing Houses Centre;
- BKM: the Interbank Card Centre system;
- TIC-RTGS: the RTGS system of the CBRT.

Chart 1

Organisation of the Turkish interbank payment system

TIC-RTGS is a real-time gross settlement system, whereas the BTOM and the BKM are deferred net settlement systems. Payment obligations resulting from stock exchange transactions are settled through the TCS.

All payments in the BTOM and the BKM are finally settled in the books of the CBRT. A separate account, the TIC-RTGS account, is used for settlement of interbank payments processed by TIC-RTGS. The BTOM and the BKM have special settlement accounts at the CBRT. Banks monitor their liquidity position by reviewing the balances in all settlement accounts. As for the settlements in the TCS, the banks' net claims are directly transferred from their Takasbank giro account to their TIC-RTGS account.

3.2 The real-time gross settlement system

TIC-RTGS is the real-time gross settlement system of Turkey. The system is owned and operated by the CBRT. The CBRT developed TIC-RTGS between October 1989 and March 1992 and put it into live operation in April 1992.

Driven by the changing demands of the banking sector and developments both in the payment systems area and in technology, a project was started in 1997 to develop the second generation of the system, which began operating in April 2000.

The second-generation RTGS system introduced an emergency backup centre and many new features, including a central queuing mechanism, funds management facilities, a direct debiting operation, phased closure of operations, and message bulking for low-value payments.

The scope of the second-generation project also covered the development of an electronic securities transfer and settlement system, TIC-ESTS, which went live in October 2000 (see Section 4.3.3).

TIC-RTGS and TIC-ESTS work in an integrated manner. Participant banks access them using a single interface, called SWITCH (a message switching system). TIC-RTGS and TIC-ESTS are directly connected to SWITCH through a proprietary network (TICNET).

Owing to their integration and common interface, TIC-RTGS and TIC-ESTS are usually regarded as a single system, which is referred to as TIC-RTGS and ESTS.

3.2.1 Operating rules

The CBRT Law, as amended in April 2001, defines the central bank's duties and responsibilities with respect to payment systems. The law authorises the CBRT to establish payment systems, determine the procedures and conditions of payment methods and instruments, and draw up regulations for ensuring their smooth operation.

The operational procedures, rights and obligations of the CBRT, as the system operator, and the participants in the system are governed by private agreements. These are supported by procedures and rules documented in the *TIC-RTGS and ESTS Operational Rules*, *TIC-RTGS and ESTS User Guide*, *TIC-RTGS and ESTS Disaster Recovery Guide*, and the relevant CBRT circulars.

3.2.2 Participants in the system

Any bank acting pursuant to the Banking Law may participate in TIC-RTGS and ESTS. The participants must be established in Turkey and maintain giro accounts with the CBRT. It is not obligatory for all banks to participate in TIC-RTGS and ESTS. Banks that do not participate in the system may access it through one of the participant banks. At end-2006, there were 48 participants in TIC-RTGS and ESTS, including the CBRT.

For ISE members that are not direct participants in TIC-RTGS and ESTS (eg brokerage houses), Takasbank (see Section 1.3.4) has developed a proprietary system called TETS through which brokerage houses can access TIC-RTGS and ESTS for cash and securities (government bonds and T-bills) transfer purposes.

3.2.3 Types of transactions handled

The TIC-RTGS system is used for interbank payments in Turkish liras relating to interbank operations (eg money market and securities settlement transactions), final settlements of cheque and credit card operations, and customer payments.

Since TIC-RTGS works in an integrated manner with TIC-ESTS, settlement of the payment leg of all DVP operations is also carried out in TIC-RTGS.

The system provides facilities for the exchange of payment-related information messages between participants.

3.2.4 Operation of the system

TIC-RTGS is based on a V-shaped architecture, where the entire message is sent to the TIC-RTGS Centre by the sending bank. A payment instruction embodied in the message is executed only if the sending bank has sufficient covering funds in its TIC-RTGS account. A successful execution of the payment instruction will result in transfer of the payment from the sending to the receiving bank across their TIC-RTGS accounts. The message is then forwarded in real time to the receiving bank.

Payments that cannot be settled because of insufficient funds are placed in a centralised payments queue. The queuing algorithm is first-in-first-out (FIFO) within priorities. TIC-RTGS has a gridlock resolution algorithm for queued payments (see Section 3.2.9.2).

The settlement in TIC-RTGS is final and irrevocable. If an operational error occurs, the parties involved must resolve it bilaterally. Participants can check their TIC-RTGS accounts at any time during the business day from their relay computers (see Section 3.2.6) and from the TIC-RTGS Centre. The participants may obtain a number of reports from their relay computers.

3.2.5 Operating hours

A typical business day lasts about 21 hours. The system opens at 08:00⁷ on Monday and on those days following official holidays. On every workday, the participants log on to the system by 09:00. The system closes at 17:30 on regular workdays and at 13:00 on half workdays.⁸

During the end-of-day procedure, the balances of TIC-RTGS settlement accounts are transferred to the participants' CBRT accounts. The housekeeping process lasts around three hours and at about 20:30 the system opens to receive messages with the next business value date. On Fridays and on the eve of official holidays, however, the system remains closed until 08:00 on the next business day. TIC-RTGS is closed during weekends and official holidays; hence, it operates 252 days a year on average.

3.2.6 Transaction processing environment

The TIC-RTGS system comprises a relay computer (RC) located on the participant's premises, a proprietary communication network (TICNET), and a central computer system.

Every participant, including the CBRT, must have an RC to participate in TIC-RTGS. The RC system, which provides all the functionality needed by the participant, is a standard hardware and software configuration managed by the CBRT. The RC provides the participant with secure message entry, message verification, account enquiry, archiving and backup facilities. The RC has a mirror copy of the central computer's reserve balances for each participant. This obviates the need for a query system on the central computer. The central bank's RC has some additional facilities. The participant's primary RC can be backed up online to a secondary RC in case of primary RC failure.

A participant's host computer can be integrated into TIC-RTGS through a connection to the RC. In this way, a host terminal at a bank branch can be used to generate payment

⁷ Turkey's time zone is CET + 1.

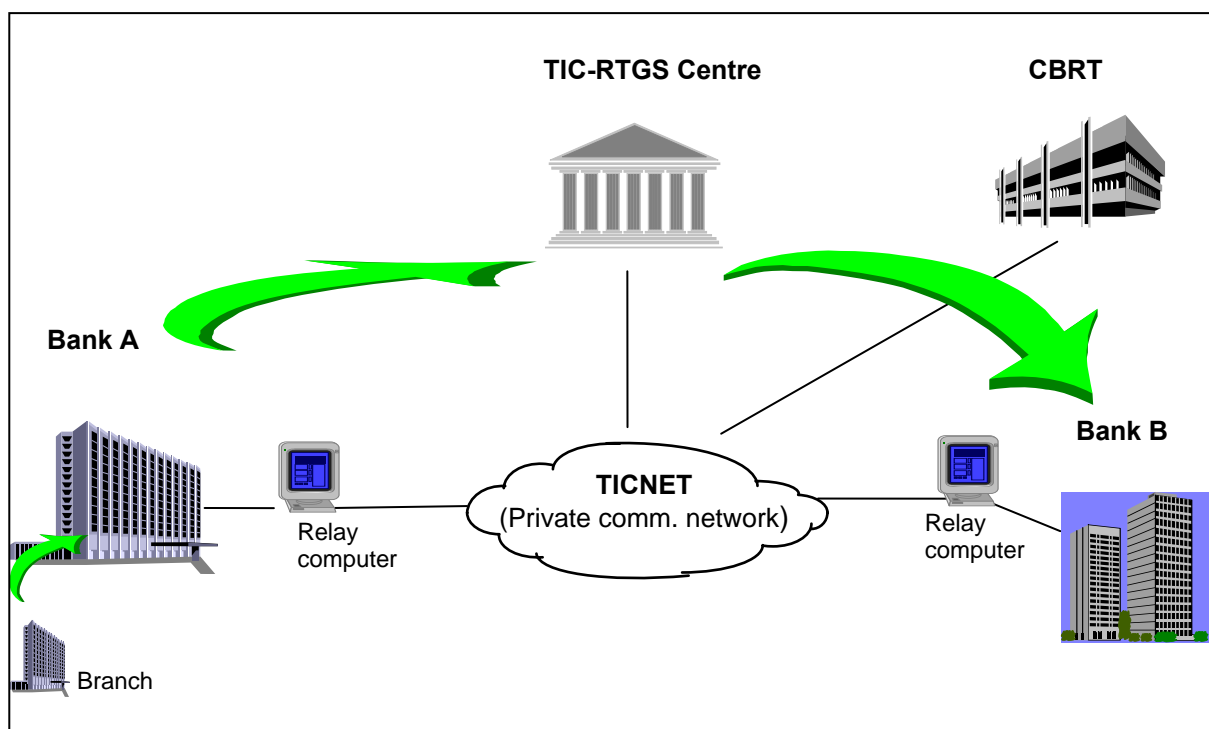

⁸ For the National Day (29 October) and two religious holidays (Bairams), the preceding day is officially a half workday.

messages. Currently, 77% of banks have host connections with TIC-RTGS. In case of a host computer failure, a bank can still send payments via its RC.

The TIC-RTGS Centre has a computer system that has no single point of failure due to redundant backup facilities. Apart from the production system, there are other systems used for system development and maintenance.

A secondary centre (emergency backup centre) has been set up to take over the operations in a very short time in the event of complete site failure at the primary centre. Moreover, in case of an online connection failure, offline facilities are also available for RC-host computer and RC-Centre connections.

Chart 2
TIC-RTGS system configuration

RCs are connected to the TIC-RTGS Centre via a private TCP/IP network called “TICNET”. Participants access TICNET nodes through leased telecommunication lines. TICNET is operated by the CBRT and the participants share its operating costs. The participants’ leased lines are backed up by ISDN lines.

A high degree of security is provided in TIC-RTGS. Multilevel security controls have been implemented to ensure the integrity, authenticity and confidentiality of transactions. Data transfers between RCs and TIC-RTGS are secured by using data encryption.

3.2.7 Settlement procedures

All messages received at the TIC-RTGS Centre are processed immediately, either by being settled, should the sender have sufficient funds for the payment, or otherwise by being queued. Settlement is final and irrevocable.

TIC-RTGS accounts are used for settlement. Initial values for these accounts are transferred from participants’ reserve requirement accounts at the CBRT at the beginning of each business day. A bank can request a transfer of funds from its free (giro) account at any time

during the business day. At the end of the day, the balances in the TIC-RTGS accounts are transferred back to the participants' reserve requirement accounts at the CBRT.

Funds are made available to the recipient bank immediately after settlement in the TIC-RTGS account. The *TIC-RTGS and ESTS Operational Rules* recommend that customer accounts be credited the same day.

In order to help settle as many payments as possible, the gridlock resolution algorithm (see Section 3.2.9.2) is manually run before the end of the day. Moreover, all funds reservations (see Section 3.2.9.2) are released upon the End-of-Day Announcement, a message issued by TIC-RTGS Centre five minutes before system closure. Any payments that remain unsettled are cancelled by the end-of-day procedure.

3.2.8 Pricing policies

There is no entrance fee or annual fee for TIC-RTGS and ESTS participants. The CBRT charges a transaction fee in order to recover the long-term operational cost and the investment cost of setting up the system. Fees are based on the value of the transaction and charged to the sending participant.

TIC-RTGS & ESTS pricing structure, 2006¹

Up to TRY 4,000 (USD 2,837)	TRY 0.10 (USD 0.07)
TRY 4,000–420,000 (USD 4,785–297,872)	0.000025 × payment amount (USD 0.07–7.45)
Over TRY 420,000 (USD 296,296)	TRY 10.50 (USD 7.45)
Non-payment transaction	TRY 0.10 (USD 0.07)

¹ The USD exchange rate at end-2006 was TRY 1.41.

In addition to the transaction fees, there are communication network-related expenses, which are shared equally by all participants. The BAT coordinates maintenance and expense sharing for the RCs and network support.

3.2.9 Risks and risk management in TIC-RTGS

3.2.9.1 Credit risk

In TIC-RTGS, payment instructions are executed only if there are sufficient funds in the participant's TIC-RTGS account. There is thus no credit risk for any payments accepted in the system for payments. Recipients are notified after the payments are settled. The central bank's intraday liquidity provisions for system participants are fully collateralised.

3.2.9.2 Liquidity risk

As a tool for managing liquidity risk, the CBRT provides an intraday liquidity facility to the participants. The funds reservation facility, central queuing and gridlock resolution mechanisms, prioritisation of payments and advanced queue management facilities also help participants to contain liquidity risks, as described below.

In order to meet temporary liquidity shortages and hence to mitigate liquidity risk in TIC-RTGS, the CBRT provides banks with an *intraday liquidity facility* between 09:00 and

15:00 (since July 1999) and a *late liquidity window facility* between 16:00 and 16:30 (since July 2002), both of which are collateralised.

The intraday liquidity facility is provided to banks within their borrowing limits. Banks do not pay interest on this facility but only a commission of 0.0048% on the principal amount of each transaction. The facility must be repaid by the end of the day; otherwise, the bank's collateral is liquidated and its intraday liquidity is converted into a penalised overnight credit.

As a lender of last resort, the CBRT also provides the late liquidity window facility to banks. Under this facility, banks can lend money to the CBRT at the central bank's borrowing rate and borrow from the CBRT at the central bank's lending rate without any limit, provided that their needs are fully collateralised.

The types of collateral that are accepted are chosen from among marketable and liquid assets. The CBRT also applies haircuts according to each asset type's historical price volatility and liquidity. Collateral holdings are blocked on a transaction basis and the collateral is marked to market. There is a centralised system in place to monitor the status of the collateral. Market participants are not able to access this system directly.

Apart from these facilities, participants may use the funds reservation facility to preplan their payments. There are three mechanisms to manage funds reservations:

- Participant may reserve a quantity of liquidity against their account for use later in the day (headroom). Headroom is not associated with any particular anticipated payments, and remains reserved until the participant releases it, or until the end of the day.
- The participant may reserve funds for high-priority payments (priority reservations). Funds reserved in this way may be used only for the settlement of high-priority payments.
- The participant may reserve funds for a specific payment anticipated later the same day (earmark). Earmarks may be created for anticipated individual payments.

As a fourth facility to manage liquidity risk, TIC-RTGS has a centralised payment queue facility. Payments are released from the queue within each priority on a first-in-first-out (FIFO) basis. Participants have full real-time control over their payment queue. They can query their queue, change the priority and order of queued payments, and cancel a payment upon the approval of the TIC-RTGS and ESTS Operation Centre. They can also query the total amount of queued incoming payments.

Moreover, the system has a gridlock resolution facility that allows payment settlements from two or more queues simultaneously without altering predetermined payment priorities, even though the payments cannot be settled separately. The facility, which is transparent to the participants, may be used manually or automatically (in preset periods).

3.2.9.3 *Operational risk*

In order to minimise the operational risk of TIC-RTGS, every component of the system has its backup.

A remote emergency backup centre began operating in 2000. The disaster centre was developed to take over the operations in a very short time, in the event of complete site failure at the primary centre. In such a case, participants' connections are automatically routed to the backup centre, which takes over the operation without any data loss or duplication.

Moreover, the business continuity arrangements in TIC-RTGS are well documented in the *Disaster Recovery Guide* and are available for implementation. The *Disaster Recovery Guide* describes the operational facilities to be used in the event of a failure in any component of the system, defines decision and notification procedures for handling abnormal situations,

and includes sample forms for information dissemination as well as the contact information of the teams that will be in charge in case of a problem. The guide also contains a section dedicated to the measures that should be taken by the participants to minimise the operational risks.

As part of the CBRT Contingency Plan, the emergency backup centre and the *TIC-RTGS Disaster Recovery Guide* are tested twice a year with different crisis scenarios.

3.2.10 Statistical data

At end-2006, TIC-RTGS had 48 participants. There has been a trend increase in both volume and value of the messages over the years. In 2006, TIC-RTGS processed 94.2 million messages for a value of TRY 15.05 trillion (USD 10.53 trillion). The average volume and value of transactions settled per day during that period were 375,337 and TRY 60.0 billion (USD 41.9 billion), respectively.

3.3 The large-value payment system

The Takasbank Clearing System (TCS) clears and settles large-value payments related to securities trades on the Istanbul Stock Exchange (ISE).

Takasbank, as the clearing and settlement institution of the ISE (see Sections 1.3.3 and 1.3.4), calculates the net obligations of parties involved in ISE markets on a multilateral basis. Both cash and securities settlement are handled by the TCS.

3.3.1 Operating rules

The operational procedures, rights and obligations of the parties are governed by the Capital Markets Law, related CMB decrees, the ISE settlement regulations, and other relevant ISE and Takasbank circulars, all of which are available on the websites of these institutions (www.cmb.gov.tr, www.ise.org, www.takasbank.com.tr). The rules do not vary with regard to the identity, type and location of the member.

3.3.2 Participants in the system

Members of the ISE are automatically members of Takasbank for settlement purposes and sign the standard agreement with Takasbank. The criteria for membership of the ISE are stated in the relevant clauses of the Capital Markets Act and in the ISE rules and regulations.

Members' terminals are connected to the Takasbank system. Prior to connection to the system, members must meet certain criteria set by Takasbank, such as system configurations, leased lines, etc.

As of November 2006, the stock market had 97 members (only brokerage houses can operate in the stock market). The bills and bonds markets had 133 members, of which 40 were banks and 93 were brokerage houses.

3.3.3 Types of transactions handled

The TCS handles the clearing and settlement of both the security and the cash legs of ISE operations.

3.3.4 Operation of the system

Takasbank calculates and announces the net obligations of members resulting from their operations in ISE markets.

On the value date, members are obliged to provide sufficient funds in their funds debit and securities debit accounts by the cutoff times set by Takasbank.

Members can credit their Takasbank funds accounts by TIC-RTGS transfers, cash delivery, or transfers from other Takasbank members. It is also possible to cover their debit positions by their claims in other markets.

At the cutoff time, Takasbank transfers members' liabilities from their funds accounts to a funds pool account. Members with net credit positions are then paid from this pool: for a bank member, its TIC-RTGS account is credited; for a non-bank member, its Takasbank giro account is credited.

If members fail to provide sufficient funds in their funds debit accounts by the cutoff time, they are charged a penalty. The penalty charges are transferred into the guarantee pool (see Section 3.3.9.1).

3.3.5 Operating hours

For the bills and bonds market, same day value trading closes at 14:00, while forward value trading can be carried out until 17:00. At 15:15 on the settlement day, Takasbank announces members' net obligations. Members then have until 16:30 to provide a sufficient balance in their funds debit account.

For the stock market, Takasbank announces the debt positions in the morning on T + 1. Members are then expected to pay their funds obligations by 16:00 on the settlement day (T + 2).

There is no end-of-day procedure. The balance of the funds debit accounts becomes zero as Takasbank debits them for settlement. Members usually transfer the balances of their giro accounts to their TIC-RTGS accounts.

3.3.6 Transaction processing environment

In the TCS, all settlement members perform settlement-related transactions from their office terminals with their leased line connections to the Takasbank host system, using the programme products downloaded to their terminals by Takasbank.

Takasbank has developed a disaster recovery plan which addresses all possible major risks that can interrupt operations. Takasbank also has a remote disaster recovery centre, which hosts a full duplicate of the primary system as well as data backups.

3.3.7 Settlement procedures

Takasbank performs multilateral netting using its members' funds and securities debit accounts. In order to minimise the principal risk, the DVP principle is used. Partial DVP is also applied, allowing members to receive the securities in amounts proportional to payment of their liabilities.

3.3.8 Pricing policies

Takasbank charges neither an entrance fee nor an annual fee to its members. Settlement is also free of charge.

3.3.9 Risk management

3.3.9.1 Principal risk

In order to eliminate principal risk, all operations are performed according to DVP (model 3).⁹

Takasbank does not guarantee settlement, and a timely settlement depends on whether members pay their obligations on time. Two guarantee funds have been established under the ISE Regulation, one for each market, in order to facilitate timely settlement and reduce settlement risk.

If a member fails to cover its funds obligations, the guarantee fund is used instead. If the amount of the unpaid obligation exceeds the guarantee fund, the security claims arising from the same settlement cycle that have been blocked for DVP settlement are liquidated to cover the outstanding obligations.

3.3.9.2 Operational risk

To mitigate the operational risk, Takasbank has established a remote disaster recovery centre, which hosts a full duplicate of the primary system as well as data backups.

3.3.10 Statistical data

In 2006, the net settled cash value of transactions in the stock market and the bills and bonds market totalled TRY 31.6 billion (USD 22.4 billion) and TRY 437.9 billion (USD 310.6 billion), respectively.

3.4 Retail payment systems

3.4.1 Interbank Card Centre (BKM)

The Interbank Card Centre (BKM) was founded as a non-profit organisation by 13 major public and private Turkish banks in 1990. As of December 2006 it had 28 members (10 shareholders) and six service providers. The regulations require that a member be either a bank or a VISA or MasterCard member.

The Centre's main fields of activity are:

- to develop procedures to be applied by banks implementing credit card and debit card systems;
- to generate decisions by performing activities aimed at standardisation;
- to establish domestic rules via applications used throughout Turkey;
- to carry out interbank clearing transactions;
- to establish relations with foreign entities and commissions and, if necessary, to represent its members with these entities;
- to carry out transactions already being performed by banks in a more secure, faster and more cost-effective manner from a single centre.

In addition, payables and receivables arising from purchases by cardholders are cleared through the Centre's domestic clearing and settlement system.

⁹ In a DVP model 1 the securities and funds are transferred on a gross basis. In a DVP model 2 the securities are transferred on a gross basis while funds are settled on a net basis. In a DVP model 3 both securities and funds are simultaneously transferred on a net basis.

The BKM is the service provider handling all activities related to the processing of credit card and debit card payments. It clears and settles all domestic credit card payments and settles debit card payments between banks. It also establishes the legal and administrative infrastructure, sets technology standards, issues a national combined warning bulletin, operates the BKM system, and provides training and security services for its members.

The BKM system started operations in 1993, enabling banks to make rational use of infrastructure and resources, typically by sharing networks and ATMs. The system's services include online credit card authorisation, standalone credit card authorisation, ATM and POS sharing for debit cards and gateways to external networks. Banks that share ATMs enable their debit cardholders to use each other's ATMs under bilateral agreements.

The BKM has a separate settlement account with the CBRT under a special agreement. This account is used exclusively for credit and debit card settlement. The BKM advises the banks and the CBRT of each bank's net debit or credit position. Banks with a debit position send instructions to the CBRT for payment out of their giro accounts. After these accounts have been debited, the payments are credited to the creditor banks. The CBRT has no responsibility for credit and debit card clearing other than providing settlement services. All debits and credits in the settlement account are booked on the basis of the details supplied by the BKM.

3.4.2 Interbank Clearing Houses Centre (BTOM)

3.4.2.1 Rules and participants

The Cheque Law defines the Interbank Clearing Houses Centre (BTOM) as a legal entity and empowers the CBRT to supervise and control the cheque clearing process nationwide. The Cheque Law and the CBRT's by-law on the BTOM govern the establishment and functioning of the interbank clearing houses (ICHs), which operate as branches of the BTOM. The CBRT issues directives and regulates the functioning of all clearing houses.

Currently, there are two clearing houses located in Ankara and Istanbul. All cheque clearing transactions are carried out electronically in the BTOM. The BTOM only processes TRY cheques.

Only banks can be members of the BTOM. All banks that provide cheque account facilities are members of the BTOM. As of end-2006, the BTOM had a total of 41 members (the CBRT, 31 commercial banks, five development and investment banks and four participation banks).

The Executive Board of the BTOM consists of a representative from the CBRT as chairman and representatives from 12 banks forming the Executive Board of the BAT.

ICHs are administered by a committee which consists of the CBRT branch manager and three representatives from banks. Their operating expenses are financed by member banks according to the banks' share in the total number of cheques processed over the year. Fixed expenditure on such items as acquisition of fixed assets, computer hardware or software is evenly distributed among member banks.

Legally, cheques are required to be presented to the clearing houses physically. However, to improve the efficiency of the clearing process and to avoid the risks associated with the physical delivery of cheques, a cheque truncation system was introduced in 1998. This allows cheques to be cleared without directly presenting them in the clearing house. This system is optional and is currently used by 32 banks. Banks wishing to use this facility are required to sign a protocol which sets out the procedures and defines obligations in the event of any legal dispute that may arise due to the non-physical presentation of cheques.

In order to improve the efficiency of the clearing process, a new electronic cheque clearing system has been in operation since September 2006.

3.4.2.2 Operation of the system

Cheques are cleared through the BTOM. Collecting banks transmit cheque information to the central computer of the clearing house around the clock. On the clearing day, information on cheques issued and received is transmitted by the banks until 06:00. This information is stored in the central computer and sent to the drawee banks where the cheque account is opened at 06:00. Although nine out of 41 banks carry out cheque transactions electronically, they also present cheques physically until 09:00 on the clearing day. Banks request provisions for cheques and the provision results (bad cheque information) are sent to the BTOM until 17:00 on the same day.

The BTOM sends a list of daily cheque clearing results to the central bank's Ankara branch for final settlement.

In 2006, a total of 23,558,235 cheques amounting to TRY 186.9 billion (USD 132.5 billion) were processed through the BTOM.

3.4.2.3 Settlement

The BTOM determines the net debit or credit positions for each bank on a multilateral basis. Banks are informed about the outcome by 18:00 each day.

The CBRT maintains a separate settlement account for the BTOM at its Ankara branch. The final settlement of operations is carried out through this account. Debtor banks have to settle their daily clearing debt by payment from their giro deposits at the central bank's Ankara branch or via TIC-RTGS not later than 12:00 on the following business day. Once all debtor banks have paid their debts, the Ankara branch makes payments to creditor banks through TIC-RTGS.

The BTOM Regulations define the rules to be applied if a participant in the system fails to fulfil its obligations. If a liquidity problem arises, the CBRT is authorised to use all the accounts of the participants at the CBRT. In addition, since the BTOM participants are banks and the CBRT provides a fully collateralised intraday liquidity facility to banks, BTOM participants may use this credit facility. Moreover, in case of failure of a participant (ie revocation or restriction of a participant's operating licence), the net positions of other participants will be recalculated by excluding the failed participant.

3.4.3 E-money schemes

Currently, e-money schemes in Turkey are limited to a few pilot projects at university campuses. A major private bank has started a pilot project at its headquarters in Istanbul and at three universities in three major Turkish cities: Ankara, Istanbul and Izmir. Smart cards issued by banks have an embedded chip that is capable of holding value and identification information for the user. Cards are used to purchase goods at vending machines and to allow users access to restricted areas. Money transfer to the card is performed at the bank's ATMs. The total numbers of cards and merchant terminals for these projects are 59,000 and 45, respectively.

3.5 Exchange and settlement systems for international transactions

Currently, there are 15 foreign banks (subsidiaries or branches of banks incorporated abroad) in Turkey. Turkish banks also have an extensive presence abroad. International transfers of both small- and large-value payments are mainly handled by the banks. The Post Office and credit card companies are also involved in small-value international payments. Like the banks, the CBRT uses the SWIFT system for foreign currency transactions.

3.5.1 Cross-border payments

International payment messages are mostly transmitted through SWIFT, which was introduced in Turkey in 1989. As of 2006, 50 financial institutions in Turkey participated in this network. In 2006, the total (sent and received) message traffic of Turkey was about 0.7% of the worldwide SWIFT traffic, with a daily average of 83,126 messages. The total numbers of messages sent and received via SWIFT in 2006 were 9.75 million and 11.06 million, respectively. Banks may use either their foreign offices or correspondent banks for making cross-border payments.

3.5.2 Retail payments (credit and debit cards)

Retail payments are made not only via banks, but also via credit card companies and the Post Office. Credit card payments are settled through the credit card companies. At end-2006, credit and debit cards issued by foreign banks had been used in Turkey for 16.4 million transactions for a total value of TRY 4.8 billion. As a result of credit and debit card transactions in the payment card system, BKM members have been instrumental in generating a considerable net foreign exchange inflow into Turkey.

3.5.3 Post Office remittances

Cross-border remittances can be sent and received via the Post Office. The Post Office has agreements and contracts with its counterparts in 40 countries and accepts remittances only from them. Since there is no postal bank in Turkey, settlement is carried out via a correspondent bank. The Post Office mostly receives remittances from Turkish workers abroad. Due to the increasing number of Turkish bank branches abroad and the presence of foreign banks in Turkey, however, there has been a decline in the use of the Post Office for international transactions. In 2006, the Post Office processed a total of 141,000 international remittances, amounting to TRY 111.3 million.

3.5.4 Traveller's cheques

Traveller's cheques are widely used in Turkey. Foreign banks issue them in all major currencies. Foreign currency traveller's cheques are encashed by directly presenting them to the paying bank.

4. Securities settlement systems

4.1 Government bonds, treasury bills and CBRT liquidity bills

Based on the Public Finance and Debt Management Law (Law No 4746 enacted in 2002), book entry government bonds and treasury bills (Domestic Debt Notes (DDNs)) are issued by the CBRT on behalf of the Undersecretariat of the Treasury in accordance with the financial services agreement between the Treasury and the CBRT.

The CBRT is the central securities depository for DDNs. It is possible to print and deliver physical certificates, but most DDNs are created by the CBRT only in the books of its securities settlement system, TIC-ESTS (see Section 4.3.3 for details). TIC-ESTS is integrated with TIC-RTGS so that a DVP model 1 is achieved.

CBRT liquidity bills are designed to absorb excess liquidity in the market in order to increase the effectiveness of the central bank's monetary policy. The liquidity bills, with a maturity of up to 91 days, may also be subject to early redemption. The bills are created by the CBRT only in the books of TIC-ESTS.

Primary market operations involving DDNs and CBRT liquidity bills are performed in TIC-ESTS, while secondary market operations are mainly carried out in ISE markets. Trades on the ISE are cleared and settled by the ISE Settlement and Custody Bank (Takasbank).

4.1.1 Primary market operations

The Treasury, which is the issuer of DDNs, determines the method and terms of issuance. The CBRT performs all operations related to issuance on behalf of the Treasury. The CBRT uses the TIC-RTGS and ESTS infrastructure to collect bids for the auctions. In the context of DDN auctions, the settlement is generally performed on T + 1, and sometimes T + 2.

Primary market settlement of DDNs and CBRT liquidity bills takes place in TIC-ESTS.

The CBRT initiates DVP settlement of the transactions based on the result of the auctions, and the participants then buy the associated securities. The settlement is performed in real time in a DVP model 1.

In addition to primary market operations, over-the-counter transactions and CBRT open market transactions are settled in TIC-ESTS on a gross basis.

4.1.2 The ISE market

4.1.2.1 Trading

Most DDN trades are performed in the ISE bonds and bills market, which is the organised, fully automated market for both outright purchases and sales and repurchase/reverse repurchase transactions. The purpose of the market is to provide a transparent, liquid, competitive and efficient environment for secondary market trading of fixed income securities comprising DDNs, CBRT liquidity bills, revenue-sharing certificates, bonds issued by the Privatisation Administration, and corporate bonds listed on the ISE. Although there is a market for the securities stated above, most of the transactions are conducted on treasury bills and government bonds.

Outright purchases and sales and repo/reverse repo transactions take place between 09:30 and 17:00 Monday to Friday. Same day value orders (the beginning value date for the repo/reverse repo market) can be matched until 14:00, whereas forward value orders are valid until 17:00. Same day value orders for mutual fund transactions can be executed until 17:00. Trading is halted during the lunch break, from 12:00 to 13:00.

4.1.2.2 Clearing and settlement

The DDN trades performed in the ISE bonds and bills market are cleared and settled by Takasbank, using the TCS. All securities intermediary institutions (brokerage houses and banks) that are certified by the CMB can be members of the ISE, and ISE members are automatically entitled to be settlement members of Takasbank.

Those trades that are matched by 14:00 are settled on the same day (T + 0). Multilateral netting is applied on a daily basis. Takasbank calculates and announces the net obligations of parties arising from their operations in ISE markets. Net obligations are legally binding but Takasbank does not guarantee settlement.

For settlement, the DVP (model 3) principle is observed, as members do not get their receivables unless they fulfil their obligations. In case of partial fulfilment of the obligation, a proportional amount of the receivable is transferred to the buyer.

Members must fulfil their obligations by transferring funds and DDNs to the specific Takasbank accounts by 16:30 through TIC-RTGS and ESTS or the Takasbank environment.

Up to 16:30 of every day, Takasbank debits member liabilities from their securities account at Takasbank and deposits them in a securities pool account. Members must have sufficient

securities in their accounts by 16:30. The securities can be transferred to the member accounts by TIC-ESTS transfers, physical delivery or transfers from other Takasbank accounts. At 16:30, the securities in the pool account are delivered to creditor members on condition that they fulfil their funds and securities obligations.

If members fail to provide sufficient securities and funds by the cutoff time, they are charged a penalty. The penalty charges are transferred into the guarantee fund.

4.2 Stocks

Capital market instruments including stocks, and the capital markets themselves, are regulated and supervised by the CMB. All stocks are registered as dematerialised shares in the CRA, which is the central securities depository. Stocks are traded on the ISE and are cleared and settled by Takasbank.

4.2.1 Trading

Stocks are traded on the ISE stock market. The fully computerised trading system enables ISE members to trade stocks and rights coupons. Prices are determined according to a “multiple price–continuous auction” method, utilising a computerised system that automatically matches buy and sell orders on a price and time priority basis. All information regarding transparency, except standing order IDs, is displayed in the trading system during the sessions.

4.2.2 Clearing and Settlement

Financial institutions operating on the ISE stock market must open custody accounts with the CRA (the central securities depository for stocks in Turkey) and fund settlement accounts at Takasbank. All securities intermediary institutions (brokerage houses and banks) that are certified by the CMB can be members of the ISE. ISE members are automatically entitled to be settlement members of Takasbank. Both the funds and the securities legs of ISE trades are settled in the TCS.

Takasbank calculates the stock and fund obligations of the parties using multilateral netting based on the data received by the ISE. The stock obligations are reported to the members and the CRA in customer details on the morning of the following business day (T + 1).

The settlement of stock trades on the ISE is done on T + 2 using electronic messaging between the CRA and Takasbank. The CRA blocks and transfers related stocks (obligations) from the participants’ accounts to the Takasbank pool account with the CRA. Members must make the stocks available to the CRA and the funds must be in Takasbank by 16:00.

The DVP model 3 is applied during the settlement process in Takasbank. Net obligations are legally binding in Turkey but Takasbank does not guarantee settlement. In case of partial fulfilment of the obligation, a proportional amount of the receivable is transferred to the buyer.

If members fail to provide enough stocks and funds by the cutoff time, they are charged a penalty. The penalty charges are transferred into the guarantee fund.

4.3 The use of the securities infrastructure by the CBRT

The CBRT, being responsible for issuing treasury bills and government bonds on behalf of the Undersecretariat of the Treasury, developed an electronic securities transfer and settlement system, TIC-ESTS, in 2000. TIC-ESTS also provides an efficient infrastructure for the market operations carried out by the CBRT as part of its monetary policy operations and for managing collateral.

4.3.1 Open market operations

To regulate the money supply and liquidity in the economy in the framework of monetary policy targets, the CBRT conducts open market operations against the Turkish lira, including outright purchase and sale of government securities, repo and reverse repo transactions, issuance of liquidity bills, and lending and borrowing of Turkish lira deposits and DDNs.

The cash settlement of these transactions takes place in the banks' TIC-RTGS accounts. The securities settlement takes place in TIC-ESTS.

Open market operations can be performed in TIC-RTGS and ESTS or on the ISE.

4.3.2 Securities lending and borrowing market in the CBRT

The collateralised securities lending and borrowing market, in which the CBRT acts as a blind broker, was established in the CBRT in 2003. Only six benchmark securities, chosen by the Treasury, are eligible for lending/borrowing transactions in this market and the transfer of loaned securities takes place through the accounts held in TIC-ESTS, as the custodian.

While primary dealers are allowed to borrow and lend, other banks can only lend securities in this market. Institutions and private investors can only lend, with banks as intermediaries.

4.3.3 CBRT securities settlement system (TIC-ESTS)

As an agent of the Undersecretariat of the Treasury, the CBRT is responsible for issuing and settling DDNs (government bonds, T-bills) on behalf of the Treasury. In October 2000, the CBRT began operating the electronic securities transfer and settlement system, TIC-ESTS, for the issuance and settlement in book entry form of DDNs and other securities issued by governmental organisations.

The TIC-ESTS system provides real-time transfer and settlement of securities. With the online real-time TIC-RTGS connection, settlement of the securities and associated funds is synchronised so that a DVP model 1 is achieved. Settled operations are irrevocable.

TIC-ESTS handles:

- primary market operations (issuance and sale of securities by the CBRT);
- secondary market operations (DVP sales between participants, transfers related to the settlement of ISE market transactions, repo and reverse repo operations);
- free transfers between the participants;
- transfers between the sub-accounts of a participant (repositioning operations);
- transfers between physical and book entry forms (rematerialisation/dematerialisation);
- redemption and coupon payment notifications;
- online inquiry and periodic reporting facilities.

On the issuance day the securities are created in the books of TIC-ESTS in the CBRT sub-account. They are then transferred to the participants' accounts in the context of primary market operations. Transfers resulting from secondary market operations are also conducted in TIC-ESTS. In addition, TIC-ESTS permits conversion of physical securities to electronic form and vice versa. In other words, securities in TIC-ESTS can be delivered in paper form if investors so require. Similarly, paper certificates may be entered into the electronic system once the holder physically submits them to a CBRT branch. As the fiscal agent of the Treasury, the CBRT issues securities in TIC-ESTS and makes principal and interest payments on government bonds and treasury bills.

4.3.3.1 *Sub-accounts*

TIC-ESTS transfers securities between the participants' securities sub-accounts. There are three types of sub-accounts: free sub-accounts, customer securities sub-accounts and collateral sub-accounts. The holdings in a participant's free sub-accounts constitute the securities directly owned by that participant. The participants segregate customer securities that are in their custody in customer securities sub-accounts. This segregation is compulsory only for securities subject to customer-based repurchase transactions. The input and output to and from collateral sub-accounts are under the control of the CBRT, and securities held in the collateral sub-accounts determine the participant's limits in the CBRT markets. The intraday liquidity limit in the TIC-RTGS system is also determined by the holdings in one of these sub-accounts within the same borrowing limits.

4.3.3.2 *DVP flow*

The DVP settlement procedure is initiated at the request of the seller. The TIC-ESTS system blocks the securities that are subject to the sell request and informs the buyer. The buyer responds either with a buy request for the full amount or with several buy requests to purchase the securities in parts. The sell and buy requests are matched in TIC-ESTS. For a valid buy request, TIC-ESTS forwards a payment request to TIC-RTGS, where the funds are settled. The payment requests for TIC-ESTS settlements are treated by TIC-RTGS as ordinary payment requests of the buyer. The securities are delivered in TIC-ESTS only if the associated funds are transferred into TIC-RTGS.

4.3.3.3 *A recent project*

The TIC-ESTS system keeps records of the securities in the name of its participants rather than in the name of customers. The system, however, allows banks to keep their customers' securities separate from their own securities.

A project has been initiated for the safekeeping of DDNs in the name of customers in the CRA, as is done with other capital market instruments. When the project is completed, banks and other intermediaries will transfer the DDNs they keep in custody for their customers to the CRA, where they will be registered in the name of the customer. Other DDNs owned by banks will reside in TIC-ESTS, but the CRA will be informed about the total holdings in each security.

In order to achieve this goal, the CRA will become a participant in TIC-RTGS and ESTS. Participants in TIC-RTGS and ESTS will transfer DDNs to and from the CRA system as they are sold to or bought from their customers using the TIC-ESTS infrastructure. The CRA will keep the records in the name of the customer based on information from the banks and other intermediaries. After the integration, TIC-ESTS will continue to be the major settlement system for primary and secondary market operations as before.

5. The role of the central bank in interbank settlement systems

5.1 TIC-RTGS and ESTS

TIC-RTGS and ESTS, which consists of the domestic RTGS payment system and the integrated securities settlement system, was developed and is operated and overseen by the CBRT.

The CBRT is responsible for:

- operating the system and providing technical and help desk support to the participants;

- setting up the legal and operational framework of the system;
- overseeing and controlling the system as a whole;
- investigating changes in participants' requirements and the need for improvements to the system, and planning development in coordination with the participants and the BAT;
- assessing new trends and needs in the banking sector and their implications for the development of the system.

5.2 Provision of settlement (and credit) facilities

5.2.1 Use of central bank accounts for payments

Banks, financial institutions, some brokerage houses and exchange offices hold cash accounts at CBRT branches. The funds in some of these accounts are used for reserve requirements and for operations in financial markets. Cheques can be drawn on these accounts.

5.2.2 Use of central bank accounts for securities transactions

Most banks hold securities accounts in the TIC-ESTS system at the CBRT head office, except for a few banks that do not participate in TIC-ESTS and thus hold securities accounts at CBRT branches. Only securities listed in the Official Gazette (ie treasury bills and government bonds) may be held in these accounts in book entry form. Securities in some of these accounts are used as collateral for operations in the CBRT interbank money market, foreign exchange and banknote markets, the securities lending and borrowing market, and in open market operations. The CBRT sets operating limits for banks for each market. Transfer of securities from collateral accounts is subject to CBRT authorisation to prevent banks exceeding the defined limit.

5.3 Monetary policy and payment systems

The CBRT determines monetary policy and uses monetary instruments to achieve and maintain price stability. It also aims at adjusting liquidity in such a way as to avoid disturbing market stability. The CBRT makes use of open market operations, the interbank money market and the foreign exchange market to maintain financial stability.

5.3.1 TRY interbank money market in the CBRT

The interbank money market was established in 1986. Lending and borrowing operations in this market are effected through the CBRT, which performs the role of blind broker. The CBRT can also borrow and lend in this market in order to regulate liquidity in the system. On 2 December 2002, the CBRT abandoned its intermediary function in the interbank money market. Since then, the CBRT has continued to perform interbank money market operations on its own behalf based on the interest rates announced by the central bank.

5.3.2 Foreign exchange and banknote market in the CBRT

The interbank foreign exchange market in Turkey is an over-the-counter market. The banks make foreign exchange transactions among themselves and through brokers. Payments related to these transactions are cleared via TIC-RTGS for Turkish liras and via SWIFT for foreign exchange. There is also a derivatives exchange established in the city of Izmir, where banks may buy and sell foreign exchange futures contracts.

Since 2002, the CBRT has ceased to act as a blind broker in the foreign exchange market. The CBRT conducts daily foreign exchange buying auctions to accumulate reserves only as long as market conditions prevail, and it occasionally intervenes in the market in the event of excess volatility.

Statistical tables

Table 1**Basic statistical data**

	2001	2002	2003	2004	2005
Population (thousands)	68,407	69,388	70,363	71,332	72,065

Note: Please refer to the individual country tables for a detailed explanation.

¹ Converted at yearly average exchange rates, except as noted. ² Total value of transactions in domestic currency deflated by yearly average CPI inflation. For the CPSS area, in US dollar terms. ³ For Italy, as a ratio to deposits held only at banks.

Japan: ¹ For the most part, data refer to total transactions during the fiscal year ending March of the following year (see Japan, Table 8). As a consequence, they are converted at average fiscal year exchange rates.

CPSS: ¹ Sum or average excluding those countries for which data are not available. For Belgium, France (prior to 2005), Singapore, Switzerland and the United Kingdom, includes interbank transactions in credit transfers. Since the value of these transactions is relatively large, cross-country comparison and the CPSS figures should be treated with caution.

Note: Please refer to the individual country tables for a detailed explanation.

¹ Value of transactions in domestic currency deflated by yearly average CPI inflation. For the CPSS area, in US dollar terms.CPSS: ¹ Sum or average excluding those countries for which data are not available. For credit transfers, Belgium, France (prior to 2005), Singapore, Switzerland and the United Kingdom include interbank transactions. Since the value of these transactions is relatively large, cross-country comparison should be treated with caution; consequently, CPSS figures related to credit transfers have not been calculated.

Note: Please refer to the individual country tables for a detailed explanation.

CPSS: ¹ Sum or average excluding those countries for which data are not available. For credit transfers, Belgium, France (prior to 2005), Singapore, Switzerland and the United Kingdom include interbank transactions. Since the value of these transactions is relatively large, cross-country comparison should be treated with caution; consequently, CPSS figures related to credit transfers have not been calculated.

Footnotes for Tables PS1–4

Canada: ¹ Final settlement occurs at 18:30. However, due to the risk controls in place, the LVTS provides intraday settlement finality. ² No standard hours.

Germany: ¹ Payments are processed in several windows. Payment orders which are submitted between 07:00 and 20:00 (domestic credit transfers as well as STEP2 credit transfers) and between 09:00 and 21:00 (direct debits and payments arising from the paperless cheque collection procedure) are processed in the evening processing. The equivalent values of credit transfers are blocked in the submitter's Bundesbank account on the submission day from 19:00 and transformed into account debit entries on the next business day. The value of cheques and direct debits is credited on the business day following submission ("subject to collection"). Payment orders which are submitted exclusively by data telecommunication between 20:00 and 07:00 (credit transfers) and 21:00 and 09:00 (direct debits and payments arising from the paperless cheque collection procedure) are processed in the morning processing. The payments are booked and delivered directly on the morning of the processing day. During the morning processing, delivery and booking of cross-border transfers received from EBA/STEP2 and the data delivery and booking of GSE items and BSE cheques (only paper-based submission by public authorities) submitted on the previous day also take place. ² Introduction of RTGS^{plus} on 5 November 2001 and closedown of ELS and EAF. ELS serves, along with SWIFT, as a means of communication to RTGS^{plus} only.

Hong Kong SAR: ¹ Central Monetary Authority.

Italy: ¹ Transfer orders are legally enforceable and binding on third parties when the system completes the gathering of the transfer orders or the bilateral balances stemming from the two BI-COMP subsystems ("Local Clearing" and "Retail").

Japan: ¹ Processing costs of transfer orders are recovered from the participants, but development and maintenance costs are covered by the Bank of Japan. ² Cutoff time is extended to 19:00 only for the participants who are approved by the Bank of Japan. ³ Cutoff time for bills and cheques sorted by banks. Bills and cheques for sorting at TCH must be submitted by 21:00 of the day before the value date. ⁴ With the consent of the receiving bank, the third-party orders may be entered for same day settlement until the cutoff time of the system. ⁵ 19:00 for market participants with access to the extended operating hours of BOJ-NET.

Netherlands: ¹ In principle; sometimes less.

Singapore: ¹ Where they differ, times for Saturdays are shown in brackets. ² MEPS does not impose a cutoff time for third-party/international correspondents' payments, but the Association of Banks in Singapore (ABS) bye-laws on MEPS require all such payments to be made by 17:30 on Mondays-Fridays and 12:30 on Saturdays. ³ On weekend transaction submissions, settlement occurs on the following Monday.

Sweden: ¹ No same day transaction. ² Payments become final on completion of settlement, which occurs throughout the day. ³ The settlement points for the different flows are spread out between 07:15 and 16:20. ⁴ The settlement points for the different flows are spread out between 07:15 and 15:20.

Switzerland: ¹ R for remote members. ² The system is open for input 24 hours a day. Settlement services are limited by the indicated opening and closing times. A value day starts at 17:00 local time on the previous business day and ends at 16:15 on the value day. Third-party payments may be entered for same day settlement until 15:00. Between 15:00 (cutoff 1) and 16:00 (cutoff 2) only cover (bank-to-bank) payments are accepted for same day settlement. From 16:00 to 16:15, transactions are restricted to the processing of lombard credits (collateralised loans from the Swiss National Bank at a penalty rate).

United Kingdom: ¹ In net settlement, the payment becomes final and irrevocable when the payment has had an effect on the bilateral net position.

United States: ¹ Local times are Eastern time. ² CHIPS, the Clearing House Interbank Payments System, is operated by CHIPCo, which is owned by the Clearing House (formerly known as the New York Clearing House Association). ³ Any depository institution, including a US branch or agency of a foreign bank, may maintain an account with a Federal Reserve Bank. To obtain an account, an institution must execute an account agreement pursuant to Operating Circular 1 (Account Relationships), which outlines the terms and conditions for a master account. An institution with an account at a Federal Reserve Bank may access Fedwire subject to the conditions detailed in Federal Reserve Operating Circular 6 and the Federal Reserve Board's Policy Statement on Payment System Risk. ⁴ Payments over CHIPS become final on completion of settlement, which occurs throughout the day. ⁵ Trading occurs among dealers for funds on deposit at Federal Reserve Banks (ie federal funds) as early as 06:30. ⁶ Number of depository institutions that used the Fedwire Funds Transfer Service in 2004. Other Fedwire Funds Transfer participants not included here are: the US Treasury and any entity specifically authorised by federal statute to use the Reserve Banks as fiscal agents or depositories; entities designated by the Secretary of the Treasury; foreign central banks, foreign monetary authorities, foreign governments and certain international organisations. ⁷ Data prior to 2003 are revised to correspond to the 2004 figure.

European Union: ¹ All times are Central European Time (CET). ² STEP2 payments are settled in EURO1 at 07.30 CET. ³ STEP2 commenced settlement transactions on 29 April 2003. ⁴ Using euro area consumer price (HICP) inflation and GDP respectively.

CLS: ¹ Includes some non-bank financial institutions. ² Central European Time (CET). ³ Each side of the transaction is counted separately. Spot and forward transactions have two sides, while swaps have four.

Footnotes for Tables SSS1–4

Belgium: ¹ Since January 2006, SSS CIK has been part of the Euroclear Group and been referred to as "Euroclear Belgium". (The ICSD that is part of the Euroclear Group is referred to as "Euroclear Bank".) ² ESCB monetary policy and credit operations (FOP).

Canada: ¹ The Bank of Canada acts as the cash settlement agent for CAD transactions that settle in CDSX. For domestic USD transactions that settle in CDSX, a commercial bank acts as the cash settlement agent. The value and volume of domestic USD transactions are relatively insignificant when compared to overall CDSX figures.

Germany: ¹ Introduction of a central counterparty (Eurex Clearing (Equities)) in April 2003. ² Mixture of DVP2 and DVP3 (securities disposition on a gross basis without finality until final settlement of net cash position). ³ For DVP (delivery versus payment) transactions. ⁴ For FOP (free of payment) transactions.

Japan: ¹ Since January 2006, in addition to commercial paper, corporate and other debt securities have been eligible for JASDEC. ² For equities traded outside the exchanges and cleared via the JASDEC DVP Clearing Corporation. ³ For exchange-traded equities cleared via the Japan Securities Clearing Corporation.

Netherlands: ¹ For DVP (delivery versus payment) transactions. ² For FOP (free of payment) transactions.

Singapore: ¹ By mutual agreement between counterparties. ² Intraday repo trading is possible but rare; in such cases, transactions must be completed by 16:30.

United States: ¹ NBES is the Federal Reserve's National Book-Entry System. ² Eastern time.
